

Dani Faria dos Santos

INFRASTRUCTURE & SECURITY ENGINEER — 26 YEARS OLD

✉ danitiago@fariadossantos.com  github.com/Dansnts  linkedin.com/in/dani-faria  fariadossantos.com
 Driving license Cat. B  French Native Portuguese C2 English C1

Systems and network engineer. Passionate about open source technologies, basketball, photography, and classic JRPGs.

SKILLS

OBSERVABILITY

Metrics: Prometheus, Grafana, Grafana Alloy
Logs: ELK Stack (Elasticsearch, Kibana, Logstash, Filebeat), Loki
GPU: DCGM, real-time monitoring of distributed workloads

VIRTUALIZATION & ORCHESTRATION

Containers: Docker / Compose, Kubernetes / K3s
GitOps & application networking: ArgoCD, Traefik, MetalLB
Hypervisors: Proxmox, VMware vSphere / ESXi, Vagrant
Container security: hardening (capabilities, AppArmor, seccomp, namespaces)

INFRASTRUCTURE & NETWORK

Systems: Windows Server / AD (GPO), Linux, macOS (ABM)
Network: Cisco, MikroTik, Ubiquiti UniFi, FreeRADIUS (802.1X), WireGuard (VPN)
Storage & data: TrueNAS / ZFS, PostgreSQL
Cloud: AWS (EC2, EKS, S3, IAM), Azure AD / Intune
Identity & secrets: Active Directory, RBAC, HashiCorp Vault, External Secrets Operator
Device fleet: MDM (Intune / ABM)

AUTOMATION & MONITORING

Infrastructure as Code: Terraform / OpenTofu, Ansible
CI/CD: Git, GitLab CI
Scripting: Go, Python, Bash, PowerShell
Application security: DevSecOps, cert-manager
Compliance: Cyber-Safe (ISO 27001), GDPR

PROFESSIONAL EXPERIENCE

2026 (6 mois)	MLOps Engineer <i>Institut IICT, HEIG-VD</i> _ Designed and deployed a distributed GPU pipeline (Ray / KubeRay, SAM3) for large-scale automatic geospatial image annotation _ Production run on 21,819 real images, up to 34h17 of continuous processing, performance and bottleneck analysis _ Full observability stack (Prometheus, Grafana, Loki, DCGM) for real-time GPU workload monitoring _ Pod hardening (non-root containers) and secrets & identity management, versioned and encrypted (SOPS + age)
2023 - 2024	Sole IT Manager, Infrastructure & Security <i>eeproperty</i> _ Identity and access management: RBAC role modelling, Active Directory (30 users, GPO, lifecycle), 40 MDM devices (Intune/ABM), 3CX VoIP on Debian _ Network architecture from scratch: DMZ + 5 VLANs, on-premise Proxmox virtualization + hybrid Hidora cloud _ Obtained Cyber-Safe certification (ISO 27001) in 6 months: audit evidence production, as sole IT owner, first time achieved by the company _ Managed severe budget constraints with open source and MikroTik solutions, negotiated increased IT budget with financial management, impact recognized after my departure
2020 - 2021	Systems & Automation Analyst <i>Nestlé</i> _ 12-month mission in a global corporate environment: IT support, live streaming events (100+ participants), deployment and support of large-scale remote work solutions _ Automated 30+ business workflows (Power Automate) and built high-impact Power BI dashboards, adopted broadly across business teams

EDUCATION

2022 - 2026

Bachelor's in Networks and Systems

HEIG-VD

- _ Distributed GPU pipeline (Ray/KubeRay, [SAM3](#)) for automatic geospatial image annotation, production run on [21,819 real images](#), Parquet output on MinIO
- _ [GPU observability stack](#): Grafana · Grafana Alloy · Loki · Prometheus · DCGM, real-time monitoring of distributed GPU workloads
- _ Container hardening (Linux capabilities, AppArmor, cgroups, namespaces, seccomp) and identity & secrets management ([Vault](#), External Secrets Operator, Keycloak)
- _ Advanced networking: [BGP](#) (inter-AS routing), high availability (VRRP / HSRP), spanning tree, dynamic routing (OSPF)

2021 - 2022

Professional Maturity

CEPV - Architecture and Life Sciences

2016 - 2020

IT Apprenticeship (CFC)

ETML

PROJECTS

2023 -
présent

● en cours

Homelab Infrastructure

- _ Two-node [K3s](#) cluster on dedicated hardware, 20+ services in production for 2+ years: full [ELK](#) stack (Elasticsearch, Kibana, Logstash, Filebeat), Immich, Jellyfin, Prometheus / Grafana / Node Exporter
- _ GitOps via [ArgoCD](#), full IaC ([Terraform](#) + Ansible), automated TLS wildcard certificates via cert-manager / Let's Encrypt, own domains + Infomaniak DDNS
- _ DNS administration: own domains, wildcards, Infomaniak DDNS, internal Pi-hole resolution, remote access via [WireGuard VPN](#) (3 tunnels)
- _ [12 TB](#) NAS with automated Google Drive backup
